

India's Agricultural Crop Production Analysis

TEAM ID	SWTID-2026-4021
PROJECT TITLE	India's Agricultural Crop Production Analysis
MAX MARKS	3 MARKS

6.4 – Dashboard

1.KPI Calculation

Calculate important Key Performance Indicators (KPIs) such as Total Production and Average Yield.

These KPIs provide a quick overview of the overall agricultural performance and are displayed at the top of the dashboard.

2. State-wise Cultivated Area Analysis

Create a bar chart

To compare the cultivated area across different states.

India's Agricultural Crop Production Analysis

This visualization helps identify states with the largest agricultural land usage and understand regional farming patterns.

3. Agricultural Yield Trend Analysis

Develop a line chart

To analyze the trend of agricultural yield from 1997 to 2021.

This helps in identifying periods of growth, decline, and fluctuations in crop productivity over time.

4. State-wise Production Distribution

Use a geographical map

To visualize agricultural production across Indian states.

The map highlights regional differences in production levels and helps users identify major agricultural hubs.

5. Crop-wise Production Analysis

Create a horizontal bar chart

To compare the total production of different crops.

This analysis helps determine which crops contribute the most to India's agricultural output.

6. Leading States by Agricultural Production

Develop a bar chart showing the top-performing states based on total agricultural production.

This enables easy comparison of state-level contributions to the agricultural sector.

7. Year-wise Production Analysis

Create a yearly production chart

To examine how agricultural production has changed over the years.

This visualization helps identify long-term production trends and growth patterns.

8. Production Distribution by Unit Type

Use a donut chart

To display production distribution based on measurement units such as tonnes and bales.

This provides a clear understanding of production volume across different unit categories.

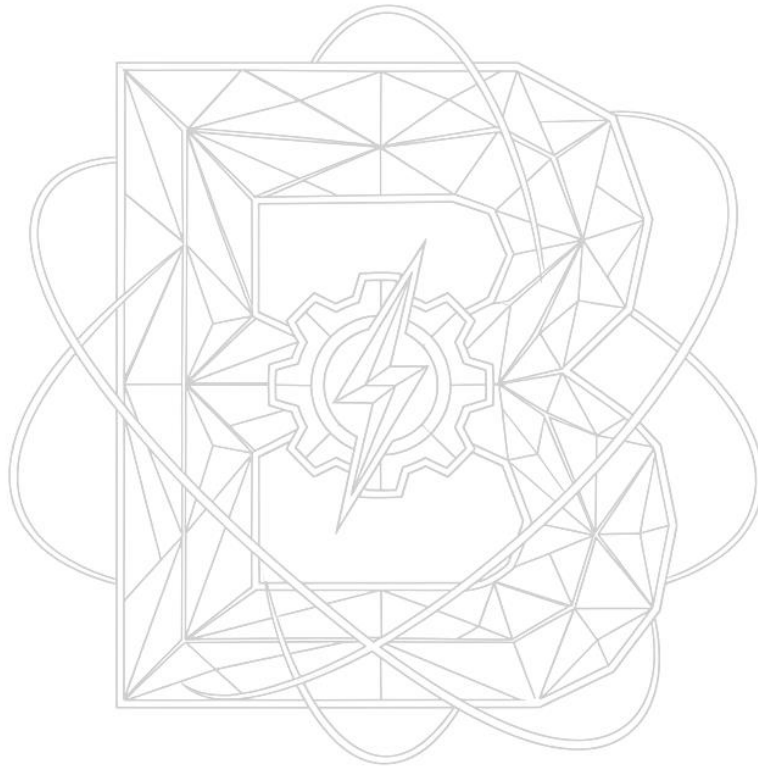

9. Season-wise Production Share Analysis

India's Agricultural Crop Production Analysis

Create a pie chart

To analyze the contribution of different agricultural seasons such as Kharif, Rabi, Autumn, and Whole Year crops.

This helps understand seasonal variations in agricultural production.
